

# COMPANY PROFILE

**VIMAR** group  
energia positiva

Products, systems and solutions for managing electric power since 1945. Vimar has been doing all this and much more, guaranteeing continuous improvement in every kind of housing style. Made in Italy combines design and technology with a view to increased reliability and energy savings. We have a term for all of this **energia positiva.**

VIMAR

PRESA BIP. 6 AMP.  
Contatti Argentati  
SERIE PIAVE  
GARANZIA 5 ANNI

Light is energy, heat, life. We have been working towards this with passion and desire for innovation since 1945, as we believe in growth and know that identity can only grow with tradition. Only in this way can we enjoy the history of success and achievements that sees us leading the Italian sector today, and present in the most important international markets.

WHO  
WE ARE

## 1945.

The Vimar adventure started in a former hat factory in Marostica, North-east Italy. The pear switch was launched before the 50s, causing Vimar to be known good heartedly as the “pear” factory for many years.

## 50s - 60s.

Electrical installations evolve: from lighting points with glass discs to the first residential series, in porcelain and thermoplastic materials.

## 60s - 70s.

Vimar patented the Sicury shutter, which prevents contact with live parts. It was made freely available to all manufacturers, becoming a regulatory standard.

## 80s.

The concept of “total quality” was born, a new approach whose cornerstones are innovation of the production cycle, internal organisation, dialogue with the market and customer satisfaction.

WHO  
WE ARE

## '90 - 2000.

New housing styles, with a more refined series, and home automation opening with By-me, the system that combines safety, comfort, energy-saving, control, communication and a video door entry system.

## 2010 - 2011.

Vimar is the official supplier for the Italian pavilion at the World Expo Shanghai: the company was chosen due to its leadership in the home automation sector and the manufacture of electric and electronic material. In 2011 Eikon Evo was born, and success came immediately. A veritable aesthetic and technological innovation, reconfirming Vimar's leadership in the home automation sector and in the production of electrical and electronic materials.

## 2012.

Vimar has acquired a majority stake in Elvox, a global player in the video entry systems, gate automation and CCTV market. The fusion has created the Vimar Group, an all-Italian enterprise with a comprehensive range of products, able to find solutions for home and buildings.

230

A turnover more than € 230 million, with annual increases of 10% over the last decade.

1,300

Many people work with passion and commitment for the company around the world.

100

Products present in more than 100 Countries, thanks to a worldwide network presence.

WHO  
WE ARE

We bring unmistakable Italian style to the world, maintaining a dynamic approach to the values and traditions of every single country, in constant balance between respect for our roots and attention to specific habits.

# 9,000

Our product range features more than 9000 items, from residential to home and building automation, video entry systems and CCTV, gate automation systems, plugs, sockets and accessories.

# 183 millions

Italy produces around 183 million pieces per year in different plants in the Italian North-East. More than 122,000 square metres of space occupied and 89,000 square metres dedicated to manufacture.

Mexico

Venezuela

Chile

Austria

UAE

Singapore

Greece

China

We want to create protected, comfortable environments, through products with intuitive functionality and unmistakably Italian design. Our patents are the fruit of a research that aims to serve the common good: like Sicury, an idea that revolutionised the safety of electrical installations and the socket outlet protection system in 1968. We decided to make it freely available to all operators in the sector. From that day on, the life of parents and children was a little more serene

WHAT WE  
BELIEVE IN

## People and values

For Vimar Group, the careful attention of those who contribute and have contributed to our success with their skills and professionalism is an inalienable and transversal value for the whole company. Continuous training, free health insurance, nursery subsidies and summer holidays for employees' children, various facilitations for pensioners and their families, plus a pleasant and stimulating work environment are proof that people are our most precious asset. It is no accident that our company complies with a health and safety management system certified to BS OHSAS 18001:2007.

## Made in Italy

The heart of the company - where we devise, design and produce products - is still located in north-east Italy, because we believe in the Made in Italy movement in all its forms. Our products are inspired by a truly unique combination of high quality aesthetics and reliable technology. From materials to lines and colour combinations to processing, we distinguish ourselves through a renowned style that speaks our language throughout the world.

## Research and Development

We invest 6% of our annual turnover in Research and Development, to ensure we always offer the very best in terms of technology and design. Over the years we have registered over 150 patents around the world that testify to the equal attention we devote to major innovation and the smaller details that guarantee the safety of simple everyday actions.

## Quality

Test products one-by-one. Not by chance have we obtained the most important quality certifications. The company has also drawn up an Ethical Code for this exact purpose, which defines behavioural guidelines for all collaborators.

## Design

We have the most expert designers available to us so that we can help housing styles evolve together: various combinations of essential lines improve the look of every environment.

## Technology

We commit time and energy to developing new projects in the electro-technical, electronics and electronic materials fields on a daily basis. Because form and innovation can live alongside each other in harmony.

WHAT WE  
BELIEVE IN

Le mura del Castello di Marostica (VI)

Above all with passion, and with great respect for the environment. Our production cycle is marked by low environmental impact, as we are aware that it is only by protecting our surroundings that we will be able to continue to grow in time, continuously and in harmony with the community.

# HOW WE WORK

## Environment

Separation, information and the creation of a culture. These are the pivotal principles of the Progetto Ambiente, an articulated programme applied across the entire production cycle. Beginning with correct waste separation, it actually allows 60% of plastic waste material and the majority of metal waste material to be recycled; Research & Development are then informed of any difficulties encountered when separating the various components, to ensure that the product is designed at the outset with the intention of being totally dismantled and recycled at the end of its life. We also provide departments with relevant information to ensure that waste is separated at source and all suitable material reused.

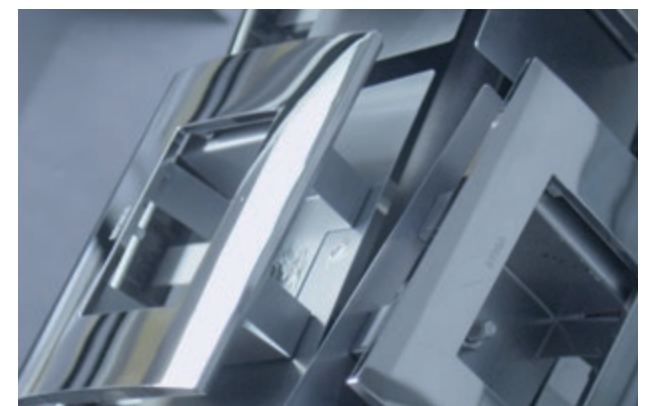

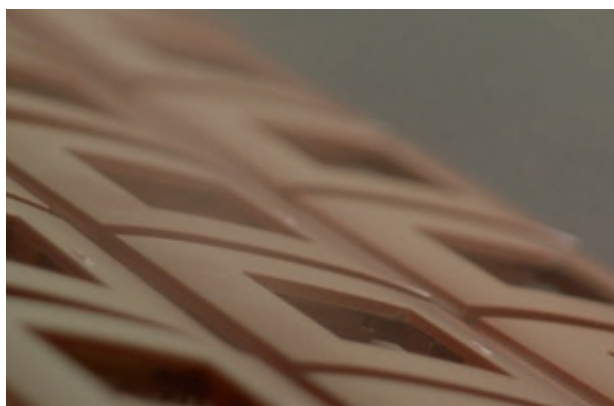

## Green paint

For years now our painting department has used only water-based or UV cross-linked paints, and we reuse the few residual solvents. This has allowed us to reduce atmospheric emissions of VOCs (Volatile Organic Compounds) to under 50% of the limits set out by the strictest European standards.

## Eliminating galvanic processes

We are progressively eliminating galvanic bath treatments for our metal finishes, replacing this highly polluting process with the innovative and greener MSD (Magnetron Sputtering Deposition) treatment, which uses physical rather than chemical principles to eliminate all harmful emissions.

Argon ions are sputtered onto metal plates in a vacuum chamber, releasing atoms which are deposited on the product to create the required finish.

HOW  
WE WORK

## Green packaging

To promote easy disposal by our customers, all our packaging is 100% recyclable. The cardboard single product packs and containers are made from recycled materials. Our corrugated cardboard multi-product boxes for transportation are printed using water-based inks with no harmful substances and use only ecological glues.

## Environmental sustainability

Demonstrating how environmental sustainability is more than just a good idea, the 11,000 m<sup>2</sup> of roofing on the company headquarters in Marostica is covered with a photovoltaic system with a guaranteed annual power production of 710,000 kWh, avoiding atmospheric emissions of 350,000 kg of carbon dioxide, 8,700 kg of sulphur dioxide, 6,800 kg of nitrogen oxide and 312 kg of particulate matter.

We find answers: to exhibit the style of every house, to offer a multi-functional interface which speaks to the user, to communicate in safety and to intelligently manage automation and lighting.

WHAT  
WE DO

# SOLUTIONS FOR ELECTRICAL INSTALLATIONS

20  
21

Five proposals from Vimar to bring light to every room, underlined by design: with the residential series, even electrical installations coordinate with the style of the house.

# Eikon

Luxury in all its forms: technological, chic, sophisticated, essential. Four ranges differing in their design, dimensions and finishes, all blending exquisite design with cutting-edge technology. For energy management in harmony with all your desires for living.

Eikon Tactil

Eikon Evo

Arké Classic

Eikon Chrome

Eikon Total look

Arké Round

# Arké

A new way of experiencing household energy. With all the quality expected from Italian-made goods. Designed today for the needs of tomorrow, Arké is Vimar's solution for current demands: a simple yet up-to-the-minute, long-lasting range that plays a concrete, intelligent role in our daily lives.

# Idea

Maximum freedom of choice, including the rigorous designs of the Classica cover plate and the rounded forms of the Rondò, the traditionalism of the anthracite grey buttons and the sobriety of the white, the fifty-one colours and the four materials.

Idea Classica

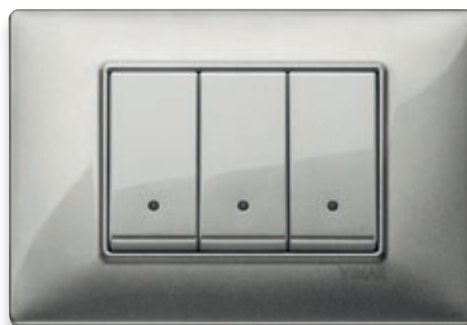

Idea Rondò

# Plana

The elegant minimalism offers infinite combinations: from white or silver buttons to the colours of the cover plates (bright for Reflex, hot in natural wood, shiny in metal and informal for those in technopolymer), Plana embodies a design that is never ostentatious.

Plana

Plana Silver

# Neve

With a linear, essential Italian style, but respecting international standards. Neve, dedicated to the foreign market, is available in four elegant nuances, ready to coordinate the entire electrical installation.

# HVAC

A wide range of heating management solutions. Wall-mounted and flush mounting timer-thermostats and thermostats. For wired and wireless installations, with the option of remote control via a mobile phone. A complete system of solutions for homes and holiday homes.

# Isoset

Protection becomes beautiful. Protected, watertight wall mounting boxes designed specifically to extend the field of application of residential series appliances. The coordinated appearance and protection requirements of electrical devices go hand in hand.

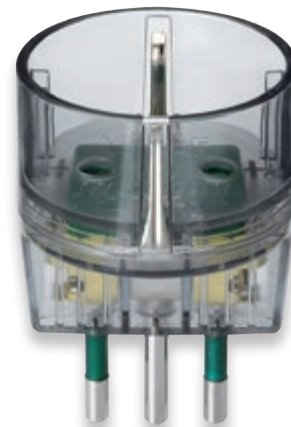

## Isobox

Many innovations, just one name. Isobox means flush mounting boxes and flush mounting and wall mounting junction boxes. Reliable products designed to ensure maximum structural strength, with special details to optimise the work of installers.

## Plugs and sockets

Safety doesn't stop at the wall, but runs through the entire system up to the farthest appliance. This is why quality must be absolute: the choice of materials, resistance tests, wiring efficiency. For plugs, sockets, adapters and mobile multiple sockets alike.

# SOLUTIONS FOR HOME

A full range featuring the state-of-the-art technology and style that Italy is renowned for the world over. Groundbreaking solutions to intelligently manage all indoor and outdoor devices and make your home the most comfortable and safest place to live.

# Control

Monitor your entire home at the push of a button.

# Comfort

Different climate, lighting and music settings for each room.

# Sound system

Independent music management in every room in the home.

# Safety

Monitor your burglar alarm system and other alarms.

# Energy saving

Power consumption and load control.

# Communication

Web interface for remote control via mobile phone, smartphone and tablet.

28

29

  
**by-me**  
home automation

## Radiofrequency

Radiofrequency devices for the home automation and lighting control, they are easy-to-use and ecologic: the EnOcean technology is their heart and enable the green energy for the activation of the buttons. And then: no battery, no cables and environment protected and contribute to energy saving.

# Video entry

State-of-the-art technology and cutting-edge design.  
A comprehensive range of products with something for every  
interior, whatever the style, and full control of what's happening  
outside the building.

# CCTV

A versatile and flexible video surveillance system to feel safe outdoors as well.

# Access control

Reliable, practical, weather-resistant mechanisms, that are easy to use to move gates, doors, shutters and up-and-over doors.

# SOLUTIONS FOR BUILDINGS

32  
33

Whatever the building, we have a solution for you. Systems and devices to manage, control and communicate in the safety, style and quality that we are renowned for.

## WELL-CONTACT PLUS

### Building automation and control system.

- Lighting and temperature management
- Automation management (blinds, gates, etc...)
- Safety management
- Power management
- Access management
- Supervision software

## CALL-WAY

### Modular calling system for the hospital sector.

- Call management
- Resource management
- Comfort management
- Interoperability with other communication systems

## NETSAFE

### Structured cabling system.

- Easy and secure communication
- Fast connection and data transmission
- Certified quality
- Broad cabling diversification

## E-WAY

### Emergency lighting system.

- Emergency lamps
- Indicator lamps
- Supervision software

# Video entry

Systems for large buildings with multiple users,  
multiple structures and multiple entry points.

# CCTV

Wide range of products to create a highly versatile video surveillance system.

# Access control

A comprehensive range of practical, reliable and hard-wearing entry-control devices.

36

37

**EDVAX**  
VIMAR group

# SOLUTIONS FOR YACHTS AND CRUISES

38

39

Vimar is the global leader in electrical supplies for ships and pleasure boats: the best vessels in the world choose the elegance and technology suited to those who do not accept compromises in terms of manufacturing quality.

# Automation on board.

## Control

Monitor everything at the push of a button.

## Comfort

Different climate settings for each room.

## Practicality

Remotely controlled infrared multi-function, programmable via the remote control.

## Management

Lights, automation and temperature are controlled from here: up to thirty possible scenes.
